

SEGG-U2-P3G-1 Configuración de Logging con Serilog

Sinks:

Console Sink: Muestra los registros directamente en la terminal donde se ejecuta la aplicación. Es útil para que el desarrollador vea lo que pasa en tiempo real mientras programa.

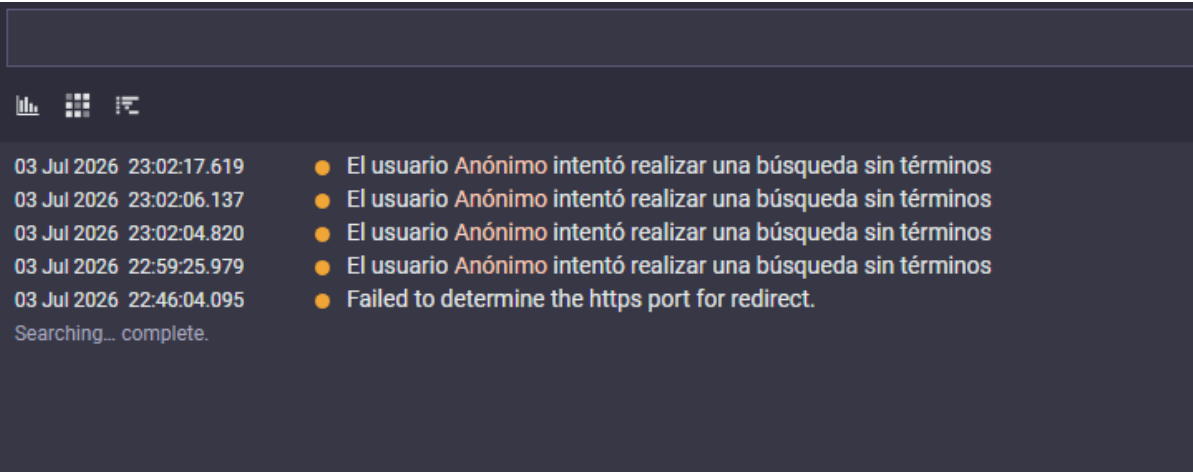

File Sink: Guarda los registros en un archivo de texto físico (con rotación diaria en tu caso). Sirve como un respaldo histórico y persistente dentro del mismo servidor.

Seq Sink: Envía los registros estructurados (JSON) a un servidor centralizado (Seq). Permite buscar, filtrar por propiedades (como IPs o Usuarios) y crear dashboards de forma rápida.

Nuevo Sink: Se usó `WithMachineName` para inyectar el nombre del equipo exacto que generó el log, lo cual es vital para el rastreo de errores si la aplicación escala y se despliega en múltiples nodos o contenedores

Warnings:

The screenshot shows a Serilog dashboard interface with a dark theme. At the top, there are three icons: a bar chart, a grid, and a magnifying glass. Below the icons, there is a table of search results. The table has two columns: a timestamp and a description of the warning. The results show five warnings, all from the user 'Anónimo' attempting a search without terms. The last entry is a warning about failing to determine the https port for redirect. At the bottom of the dashboard, there is a status bar that says 'Searching... complete.'
